NGSS Code(s):	

***ALIGNMENT TO STANDARDS: NGSS**

Criteria	0	1	2	General Comments and Observations	Suggestions for Improvement (if applicable)
	Criterion is absent in the task/lesson. Please provide suggestions for how the lesson/task can be modified to meaningfully address the criterion.	Criterion is present in the lesson/task but not adequately or in a superficial manner. Please explain why you think the criterion is inadequately or superficially addressed and provide suggestions for how the lesson/task can be modified to meaningfully address the criterion.	Criterion is meaningfully and adequately addressed in the task/lesson. Please provide a brief explanation/justification for this.		
A. Integrates grade appropriate elements of the three dimensions of the NGSS Framework: science and engineering practice(s), disciplinary core idea(s), and crosscutting concept(s).					
<input type="checkbox"/> i. Provides opportunities to develop and use specific elements of the practice(s) to make

sense of phenomena and/or to design solutions to problems.					
<input type="checkbox"/> ii. Provides opportunities to develop and use specific elements of the disciplinary core idea(s) to make sense of phenomena and/or to design solutions to problems.					
<input type="checkbox"/> iii. The three dimensions work together to support students to make sense of phenomena and/or to design solutions to the problems.					
<input type="checkbox"/> B. Lessons fit together coherently targeting a set of performance expectations. (For multi-lesson sequences.)					
<input type="checkbox"/> C. Where appropriate, disciplinary core ideas from different science and engineering disciplines are used together to explain phenomena.					
<input type="checkbox"/> D. Where appropriate, crosscutting concepts are used in the explanation of phenomena from a variety of disciplines.					
<input type="checkbox"/> E. Provides grade appropriate connection(s) to the Common Core State

		for how the lesson/task can be modified to meaningfully address the criterion.			
A. Lesson is aligned with the eight Standards for Mathematical Practice:					
<input type="checkbox"/> i. Makes sense of problems and persevere in solving them.					
<input type="checkbox"/> ii. Reasons abstractly and quantitatively.					
<input type="checkbox"/> iii. Constructs viable arguments and critique the reasoning of others.					
<input type="checkbox"/> iv. Models with mathematics.					
<input type="checkbox"/> v. Uses appropriate tools strategically.					
<input type="checkbox"/> vi. Attends to precision.					
<input type="checkbox"/> vii. Looks for and make use of structure.					
<input type="checkbox"/> viii. Looks for and express regularity in repeated reasoning.					
<input type="checkbox"/> B. Lessons are aligned with grade-appropriate Standards for Mathematical Content					
<input type="checkbox"/> C. Connects the Standards for Mathematical Practices to the Standards for Mathematical Content for

INSTRUCTIONAL STRATEGIES: Learning Environment

The lesson/unit is responsive to varied student learning needs:

Criteria	0	1	2	General Comments and Observations	Suggestions for Improvement (if applicable)
A. Differentiates and individualize learning. (Sotomayor, K., 2013)					
<input type="checkbox"/> i. Customizes learning to fit each student's individual level and pace, and provides immediate feedback and assessment.					
<input type="checkbox"/> ii Uses mixed modalities.					
<input type="checkbox"/> iii. Incorporates student choice.					
B. Lesson includes elements of collaboration / cooperation (Duschl et al.					

Version 2: published September 2016

Recommended citation: Rodriguez Amaya, L., Martinez Ortiz, A., Vomvoridi-Ivanovic, E., Sorto, M.A., Close, E., Dickinson, G., Bos, B., Bowman, A. (2015). STEM Curriculum Review Rubric. LBJ Institute for STEM Education and Research, Texas State University.

2007; Huang et al. 2008; Morrison et al. 2008).					
<input type="checkbox"/> i. Designed around student discussion.					
<input type="checkbox"/> ii. Students are encouraged to seek input from all collaborators / sources.					
C. Lesson design / teacher materials includes affective domain considerations.					
<input type="checkbox"/> i. Attention to intellectual safety and creating a sense of belonging (Morrison et al. 2008).					
<input type="checkbox"/> ii. Provides instructions to the teacher on how to address affective issues on potentially controversial topics.					

INSTRUCTIONAL STRATEGIES: Best Practices in Science and Engineering Teaching

Criteria	0	1	2	General Comments and Observations	Suggestions for Improvement (if applicable)
	Criterion is absent in the task/lesson. Please provide suggestions for how the lesson/task can be modified to meaningfully address the criterion.	Criterion is present in the lesson/task but not adequately or in a superficial manner. Please explain why you think the criterion is inadequately or superficially addressed	Criterion is meaningfully and adequately addressed in the task/lesson. Please provide a brief explanation/justification for this.

		and provide suggestions for how the lesson/task can be modified to meaningfully address the criterion.			
A. Students are actively constructing meaning using one or more of the following instructional strategies (NRC 2011):					
<input type="checkbox"/> i. Experiments (please specify level): student designed / teacher designed with multiple pathways / “cookbook”.					
<input type="checkbox"/> ii. Investigations (exploring, looking for patterns, making conjectures, inferring, generalizing)					
<input type="checkbox"/> iii. Problem-Based (short-term, problem-oriented lessons that do not focus on a product).					
<input type="checkbox"/> iv. Project-Based (lessons that are part of a larger long-term unit that focus on student-generated products).					
<input type="checkbox"/> v. Other meaning-making strategies (please specify) _____					
B. Lesson plan incorporates learning progressions and connections (Duschl et al. 2007).					
<input type="checkbox"/> i. Lesson explicitly identifies learning

Recommended citation: Rodriguez Amaya, L., Martinez Ortiz, A., Vomvoridi-Ivanovic, E., Sorto, M.A., Close, E., Dickinson, G., Bos, B., Bowman, A. (2015). STEM Curriculum Review Rubric. LBJ Institute for STEM Education and Research, Texas State University.

progressions for the main concepts and provides teachers with ideas for moving students towards the scientific understanding.					
<input type="checkbox"/> ii. Lesson sequences instruction in a way that takes into consideration learning progressions.					
<input type="checkbox"/> iii. Lesson assessments promote teacher understanding of students' progress towards scientific understanding.					
C. Emphasizes scientific argumentation (Frey et al, 2015)					
<input type="checkbox"/> i. Students generate data or use existing data sets; evaluate scientific evidence.					
<input type="checkbox"/> ii. Students use evidence to support claims. Students make their chain of reasoning explicit.					
<input type="checkbox"/> iii. Students identify the reasoning that led to a claim, and judge the quality of the reasoning.					
<input type="checkbox"/> iv. Students rebut others' ideas and/or provide counterarguments					
<input type="checkbox"/> v. Argumentation fosters students' understanding of scientific concepts (i.e. not argument for argument's sake).

<input type="checkbox"/> vi. Argumentation enhances students' understanding of how personal and scientific knowledge are constructed.					
D. Lesson makes learning and content relevant and contextual (Duschl et al. 2007; NRC 2011; Huang et al. 2008)					
<input type="checkbox"/> i. Lesson capitalizes on student's interests and experiences (NRC 2011; Ginns and Norton 2005; Kaser 2010).					
<input type="checkbox"/> ii. The activities are embedded in some greater context that makes the work have a purpose.					
<input type="checkbox"/> iii. The activities make STEM instruction a necessary means to designing an effective product or process.					

+INSTRUCTIONAL STRATEGIES: Mathematics Teaching Practices

Criteria	0	1	2	General Comments and Observations	Suggestions for Improvement (if applicable)
	Criterion is absent in the task/lesson. Please provide suggestions for how the lesson/task can be modified to meaningfully address the criterion.	Criterion is present in the lesson/task but not adequately or in a superficial manner. Please explain why you think the criterion is inadequately or superficially addressed and provide suggestions for how the lesson/task	Criterion is meaningfully and adequately addressed in the task/lesson. Please provide a brief explanation/justification for this.

		can be modified to meaningfully address the criterion.			
<input type="checkbox"/> A. Establishes mathematics goals to focus learning.					
<input type="checkbox"/> B. Implements tasks that promote reasoning and problem solving.					
<input type="checkbox"/> C. Uses and connects mathematical representations.					
<input type="checkbox"/> D. Facilitates meaningful mathematical discourse.					
<input type="checkbox"/> E. Poses purposeful questions.					
<input type="checkbox"/> F. Builds procedural fluency from conceptual understanding.					
<input type="checkbox"/> G. Supports productive struggle in learning mathematics.					
<input type="checkbox"/> H. Elicit and use evidence of student thinking.

	lesson/task can be modified to meaningfully address the criterion.	superficial manner. Please explain why you think the criterion is inadequately or superficially addressed and provide suggestions for how the lesson/task can be modified to meaningfully address the criterion.	provide a brief explanation/justification for this.		
A. Academic Language support for ELLs:					
<input type="checkbox"/> i. Presents content and language /literacy objectives: Without giving away what students will be discovering, both language and content objectives are presented to the students at the beginning of the lesson.					
<input type="checkbox"/> ii. Builds Background: Uses appropriate visuals, manipulatives, etc. to help students understand concepts.					
<input type="checkbox"/> iii. Attends to multiple meanings: Particular attention is given to the way language is used in and out of mathematics (e.g. Foot, yard, table, etc.) or science.					
<input type="checkbox"/> iv. Honors use of native language: Have students use their preferred language in small groups and classroom discussions.					
<input type="checkbox"/> v. Encourages multiple modes of communication:

<p>Code switching, gestures, synonyms, drawings, cognates or use of two languages (<i>translanguaging</i> which is the dynamic use of two languages and goes beyond code switching - Sorto et al 2014); utilize a multilingual glossary, etc.</p>					
<p><input type="checkbox"/> vi. Uses comprehensible input: The linguistic demand of the task is not high: i.e. teachers do not use unnecessary words or phrases, especially in questions. Instructor’s guide suggests use of short and clear sentences, gestures and motions, a variety of tools to help students visualize and understand what is verbalized. Appropriate pictures, real objects, and diagrams are used.</p>					
<p><input type="checkbox"/> vii. Explicitly teaches vocabulary: Lesson plan identifies the terms related to the mathematics/science topic and the context of the task that may need explicit attention. The lesson is not frontloaded with key terms but these terms are discussed in the context of the task at hand as well as being provided as a lesson-specific listing.</p>					
<p>B. Cognitive Demand: The task or majority of the lesson includes task(s) that require close analysis of procedures and concepts, involves complex mathematical/scientific thinking,</p>

utilizes multiple representations AND requires explanation/justification.					
<input type="checkbox"/> i. Provides opportunities to analyze procedures and/or concepts. There is a balance between procedures and concepts.					
<input type="checkbox"/> ii. Provides opportunities for complex mathematical/scientific thinking.					
<input type="checkbox"/> iii. Provides opportunities to analyze (scientific) problems.					
<input type="checkbox"/> iv. Utilizes multiple representations.					
<input type="checkbox"/> v. Requires the justifying and/or explaining concepts or procedures.					
C. Power and Participation: The development of mathematical / scientific knowledge (see NGSS, CCSS) is seen as a collaborative effort between teacher and student.					
<input type="checkbox"/> i. Mathematical / scientific contributions are actively elicited by teacher and among students.					
<input type="checkbox"/> ii. All mathematical/scientific contributions are valued and respected by teacher and students.					
<input type="checkbox"/> iii. Multiple strategies to support a sense of status equity among students (and specific subgroups) are explicit and widespread throughout the lesson.					
D. Incorporating students' identities and funds of

<p>knowledge/culture/community: The creation and maintenance of collective understandings about mathematics that involves intricate connections to personal/community/cultural knowledge and permeates the entire lesson. This would include hook/intro, main activities, assessment, closure and homework.</p>					
<p><input type="checkbox"/> i. Content relates to familiar aspects of students' lives and/or students are invited to share their experiences with the topic in the lesson.</p>					
<p><input type="checkbox"/> ii. Students are asked to make connections between school mathematics/science and mathematics/science in their own lives: e.g. Students are asked to analyze the mathematics within the community context and how the mathematics helps them understand that context.</p>					
<p><input type="checkbox"/> iii. Lesson/task includes activities that provide firsthand experiences with phenomena when practical or provide students with a vicarious sense of the phenomena when not practical.</p>					
<p><input type="checkbox"/> iv. Prior knowledge is elicited/reviewed so that all students participate in the lesson.</p>

Recommended citation: Rodriguez Amaya, L., Martinez Ortiz, A., Vomvoridi-Ivanovic, E., Sorto, M.A., Close, E., Dickinson, G., Bos, B., Bowman, A. (2015). STEM Curriculum Review Rubric. LBJ Institute for STEM Education and Research, Texas State University.

<input type="checkbox"/> v. Students' interests are used to build interest and mathematical / scientific meaning.					
<input type="checkbox"/> vi. Multiple modes (e.g. visuals, explanations, models) to demonstrate knowledge are valued.					
<input type="checkbox"/> vii. Alternative approaches to doing mathematics (e.g. algorithms used in different countries) or science are valued.					
<input type="checkbox"/> viii. Students are given opportunities to apply learning to new and different problems in their lives and use the appropriate scientific method or mathematical model to solve the problem at hand.					
E. Use of critical knowledge/social justice: Mathematics/science is viewed as an analytical tool to understand an issue/context, formulate mathematically/scientifically-based arguments to address community/societal the issues, and provide substantive pathways to change/transform the issue.
