

# Forensic Facial Reconstruction Sculpture

With Karen T. Taylor

[www.karenttaylor.com](http://www.karenttaylor.com)

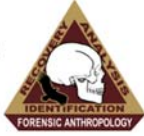

This hands-on workshop presents the forensic technique of sculpting a face based on the bony architecture of the skull. Attendees learn step-by-step procedures for creating an accurate skull-to-face likeness along with the placement and function of head and neck muscles. Participants will build musculature and facial features using oil-based plastilene clay. Anatomical skull models are provided for in-class use only. We will work on identical skull castings to incorporate elements of the *Anatomical* and the *Tissue Depth Facial Reconstruction* approaches using a *Combination Method*. Upon completion of the sculptures, attendees will see and compare an actual life photo of the deceased person whose skull they have reconstructed.
